# Infectious Diseases Of Haiti (GIDEON Ebook Series)

## Synopsis

INFECTIOUS DISEASES OF HAITI is one in a series of GIDEON e-books which summarize the status of individual infectious diseases, in every country of the world. Data are based on the GIDEON database ([www.gideononline.com](http://www.gideononline.com)) which relies on standard text books, peer-review journals, Health Ministry reports and ProMED, supplemented by an ongoing search of the medical literature. Chapters are arranged alphabetically, by disease name. Each section is divided into four sections: 1. Descriptive epidemiology 2. Summary of clinical features 3. Status of the disease in Haiti 4. References

There are 347 generic infectious diseases in the world today. 198 of these are endemic, or potentially endemic, to Haiti. A number of other diseases are not relevant to Haiti and have not been included in this book. In addition to endemic diseases, we have included all published data regarding imported diseases and infection among expatriates from this country. The availability and quality of literature regarding specific infectious diseases vary from country to country. As such, you may find that many of the sections in this book are limited to a general discussion of the disease itself - with no data regarding the country under review. Since this book focuses on Geographic Medicine, it does not include detailed information on diagnostic testing, pathogenesis, therapy or molecular biology. Many of the diseases are generic. For example, such designations as Pneumonia bacterial and Urinary tract infection include a number of individual diseases. These appear under the subheading, Synonyms, listed under each disease.
