# Simplified Design Of Wood Structures

## Synopsis

No architect's education would be complete without a basic understanding of how structures respond to the action of forces and how these forces affect the performance of various building material (wood, steel, concrete, etc.). In continuous publication for over 60 years, this standard guide to structural design with wood has now been updated to include current design practices, standards, and consideration of new wood products. Now covering the LRFD method of structural design in addition to the ASD method, expanded treatment of wood products besides sawn lumber, and with more examples and exercise problems, this edition stands as a valuable resource that no architect or builder should be without. The Parker/Ambrose Series of Simplified Design Guides has been providing students with simple, concise solutions to common structural and environmental design problems for more than seven decades.

## Book Information

Hardcover: 416 pages

Publisher: Wiley; 6 edition (March 3, 2009)

Language: English

ISBN-10: 0470187840

ISBN-13: 978-0470187845

Product Dimensions: 5.9 x 1.1 x 8.8 inches

Shipping Weight: 1.2 pounds (View shipping rates and policies)

Average Customer Review: 4.3 out of 5 stars 6 customer reviews

Best Sellers Rank: #282,522 in Books (See Top 100 in Books) #92 in [Books > Crafts, Hobbies & Home > Home Improvement & Design > How-to & Home Improvements > House Plans](#) #132 in [Books > Engineering & Transportation > Engineering > Civil & Environmental > Structural](#) #652 in [Books > Arts & Photography > Architecture > Buildings](#)

## Customer Reviews

Newly updated; the most accessible, thorough introduction to the basics of wood structure design No architect's education would be complete without a basic understanding of how structures respond to the action of forces and how these forces affect the performance of various building material (wood, steel, concrete, etc.). In continuous publication for over sixty years, this standard guide to structural design with wood has now been updated to include current design practices, standards, and consideration of new wood products. Written to be easily understood by readers with limited experience in engineering mechanics, structural analysis, or advanced mathematics, the

book now features: Consideration of the LRFD method of structural design in addition to the ASD method Updated coverage conforming to current building codes, design practices, and industry standards Expanded treatment of wood products beyond sawn lumber More examples and a wider sweep of systems and products Equally suited to classroom use or independent study, Simplified Design of Wood Structures, Sixth Edition stands as a valuable resource that no architect or builder should be without. The Parker/Ambrose Series of Simplified Design Guides has been providing simple, concise solutions to common structural and environmental design problems for more than seven decades.

James Ambrose is Editor of the Parker/Ambrose Series of Simplified Design Guides. He has practiced as an architect in California and Illinois, and as a structural engineer in Illinois. He was professor of architecture at the University of Southern California. Patrick Tripeny is an Associate Professor and the Director of the School of Architecture at the University of Utah. He is a licensed architect in California, where he practiced architecture before returning to academia. He has been the recipient of a number of teaching awards at the local and national level for his work in teaching structures and design.

If you're doing any design of wood structures, this is the book to have. Great references, cut the fat content. Very good for real world application design. Super inexpensive.

This book is a great refresher or textbook for design professionals. Not as in depth as the true wood design bible (NDS) but it does clearly cover all bases required for straight forward design work or preliminary sizing of structural members. The calculations cover ASD and LRFD calculations and the two blur upon first read but after a second examination the each calculation is distinguished from the other. In my experience this seems to be the norm of books that cover both types of calculations.

Concise and really practical

Very good book.

This textbook is a very useful resource for my Temporary Structures College Course Class. It is a physically compact book.

I have tried to contact the seller various times to return the book but I get no reply. I have dropped this course and for a month now I have unsuccessfully tried to contact the seller. I did receive the book on time but the course was dropped and no return/refund policy was posted.
