Dirtmeister's Nitty Gritty Planet Earth: All About Rocks, Minerals, Fossils, Earthquakes, Volcanoes, & Even Dirt! (National Geographic Kids)

Synopsis

Come and explore the world under your feet with the Dirtmeister and friends! Part graphic novel, part fun guidebook, this very cool, rocky journey introduces both eager and reluctant readers to the basic geologic processes that shape our Earth. Clear and concise explanations of the various geologic processes reveal the comprehensive science behind each fascinating topic. Fun facts and simple DIY experiments reinforce the concepts while short biographies of important scientists inspire future geo-scientists.

Book Information

Lexile Measure: 1040 (What's this?)

Series: National Geographic Kids

Paperback: 128 pages

Publisher: National Geographic Children's Books (June 9, 2015)

Language: English

ISBN-10: 1426319037

ISBN-13: 978-1426319037

Product Dimensions: 7.5 x 0.3 x 10 inches

Shipping Weight: 13.6 ounces (View shipping rates and policies)

Average Customer Review: 5.0 out of 5 stars 11 customer reviews

Best Sellers Rank: #132,167 in Books (See Top 100 in Books) #13 in Books > Children's Books > Education & Reference > Science Studies > Nature > Earthquakes & Volcanoes #39 in Books > Children's Books > Education & Reference > Science Studies > Nature > Rocks & Minerals #90 in Books > Children's Books > Education & Reference > Science Studies > Earth Sciences

Age Range: 8 - 12 years

Grade Level: 3 - 7

Customer Reviews

"Dirtmeister's Nitty Gritty Planet Earth is well organized, with a balanced mix of cartooning and seriousness. Stephen Tomecek and Fred Harper together succeed in making Earth science fun." - New York Journal of Books

Stephen M. Tomecek (a.k.a. "The Dirtmeister®") is the Executive Director and founder of Science Plus, Inc. Steve began his professional career as a geologist (yes, he's a real scientist!). The title "Dirtmeister" was hung on him over 20 years ago by his students at the New York Botanical

Gardens where he taught courses in soil science. He served as the Associate Director for the Science Museum of Long Island and as the Science Program Supervisor for the New York Hall of Science. He currently serves as a writer and science consultant for the National Geographic Society, Scholastic, Inc, and Chelsea House. In the past he has written and has helped to develop web sites for Discovery Communications, the Johns Hopkins School of Public Health, and Los Alamos Labs. Steve has written over 45 nonfiction books for both teachers and kids.

I've long been a fan of National Geographic books for kids and this book is another wonderful example of why that is the case. Steve Tomecek (aka The Dirtmeister) takes readers on a wonderfully informative journey through the science of our planet. Starting with the science of the earth's development, he also covers facts about earthquakes, volcanoes, soil, rocks, weathering and erosion. Each section starts with a fun little comic followed by several pages of description, graphics, and photographs discussing each topic. The design is fresh and appealing and the information fascinating. The inclusion of various experiments demonstrating some of the different processes that are presented is an awesome touch. These could be done at home or by a teacher in a classroom to help students understand the different processes. I loved the book and plan to recommend it to young geology lovers and teachers alike.

I've given this book 5 Stars as I'm pleased with it....that being said, the child I purchased it for is not quite at the reading level required yet. I'm sure the 7 year old and this 75 year old will enjoy it together and it'll be a keeper for him. It's a Christmas gift so he hasn't explored the fun & colorful pages as of this time.

My six year old son loves this book. I love this book. There is a ton of information amidst the great photos and illustrations. You can easily read two pages and gather lots of succinct info; I find that material not in story form can get boring for this age group, two pages gives a lot without getting boring. Absolutely recommend. This would be a great gift with one of rose crystal mining kits.

My grandson, Finn, loved it! He's planning on being a Paleontologist some day (We'll see!!), and all books on dinosaurs, dirt, rocks, fossils, etc., etc. fill him with joy!!! A good investment, for sure! (He's a 7-year-old.)Alice Neely

Really cool book, my 10 year old son likes it.

This was a Christmas gift for an 11 year old boy interest in rocks. He really liked this book!

Bought this for my grandson and my granddaughter loves reading it

My 8 year old grandson loved it -- especially since they were studying this subject in school.
